# **Project Planning Phase**

## **Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)**

| Date          | 22 October 2022                       |
|---------------|---------------------------------------|
| Team ID       | PNT2022TMID52879                      |
| Project Name  | Classification Of Arrhythmia By Using |
|               | Deep Learning With 2-D ECG Spectral   |
|               | Image Representation                  |
| Maximum Marks | 8 Marks                               |

### **Product Backlog, Sprint Schedule, and Estimation (4 Marks)**

Use the below template to create product backlog and sprint schedule

| Sprint   | Functional<br>Requirement (Epic)         | User<br>Story | User Story / Task                                   | Story<br>Points | Priority | Team Members                                  |
|----------|--|---------------|---|-----------------|----------|---|
|          | Requirement (Epic)                       | Number        |   | Tomes           |          |   |
| Sprint-1 | Download The<br>Dataset                  | USN-1         | We can download the Dataset contains<br>Six classes | 1               | Low      | Mridhul K<br>Malepati Pranavi                 |
| Sprint-1 | Import The ImageDataGenerator Library    | USN-2         | We can import ImageDataGenerator                    | 1               | Low      | Gayathri S<br>Aaryan Siddharthan              |
| Sprint-1 | Configure<br>ImageDataGenerator<br>class | USN-3         | We can configure the ImageDataGenerator class       | 1               | Low      | Mridhul K<br>Malepati Pranavi                 |
| Sprint-2 | Apply the ImageDataGenerator             | USN-4         | We can apply ImageDataGenerator to train dataset    | 2               | Medium   | Aaryan Siddharthan<br>Mridhul K<br>Gayathri S |

| Sprint   | Functional<br>Requirement (Epic)      | User<br>Story<br>Number | User Story / Task  | Story<br>Points | Priority | Team Members  |
|----------|---------------------------------------|-------------------------|--|-----------------|----------|---|
|          | functionality to Trainset and Dataset |                         |  |                 |          | Malepati Pranavi  |
| Sprint-1 | Import Libraries                      | USN-5                   | We can import required Libraries   | 1               | Low      | Aaryan Siddharthan  |
| Sprint-1 | Initialize the Model                  | USN-6                   | Initializing the Image recognition model 2   |                 | Medium   | Gayathri S<br>Mridhul K   |
| Sprint-4 | Adding CNN layer                      | USN-7                   | We can add Convolutional Neural<br>Network(CNN) used for image/object<br>recognition and classification  | 4               | High     | Malepati Pranavi<br>Aaryan Siddharthan                            |
| Sprint-4 | Adding Dense Layer                    | USN-8                   | We can add Dense Layer in which each neuron receives input from all the neurons of previous layer  | 4               | High     | Mridhul K<br>Gayathri S<br>Malepati Pranavi                       |
| Sprint-4 | Configure The<br>Learning Process     | USN-9                   | We can configure The Learning process which is a method, mathematical logic or algorithm that improves the network's performance and/or training time. | 4               | High     | Aaryan Siddharthan<br>Mridhul K<br>Gayathri S<br>Malepati Pranavi |
| Sprint-3 | Train the Model                       | USN-10                  | We can train our model with our image dataset. fit_generator functions used to train a deep learning neural network                                    | 3               | High     | Aaryan Siddharthan<br>Gayathri S                                  |
| Sprint-1 | Save the Model                        | USN-11                  | We can save The model with .h5 extension   | 2               | Medium   | Malepati Pranavi<br>Mridhul K                                     |
| Sprint-2 | Test the model                        | USN-12                  | We can Test the model through Loaded necessary libraries, the saved model  | 2               | Medium   | Mridhul K<br>Aaryan Siddharthan                                   |

| Sprint   | Functional         | User   | User Story / Task                         | Story         | Priority | Team Members       |
|----------|--------------------|--------|---|---------------|----------|--------------------|
|          | Requirement (Epic) | Story  |   | <b>Points</b> |          |                    |
|          |                    | Number |   |               |          |                    |
| Sprint-3 | Create Html files  | USN-13 | We use HTML to create the front end       | 3             | High     | Gayathri S         |
|          |                    |        | part of the web page.                     |               |          | Malepati Pranavi   |
| Sprint-4 | Build Python code  | USN-14 | We build the flask file 'app.py' which is | 4             | High     | Mridhul K          |
|          |                    |        | a web framework written in python for     |               |          | Malepati Pranavi   |
|          |                    |        | server-side scripting.                    |               |          |                    |
| Sprint-1 | Run the App        | USN-15 | We can run the App                        | 2             | Medium   | Aaryan Siddharthan |
|          |                    |        |   |               |          | Gayathri S         |
| Sprint-2 | Register IBM Cloud | USN-16 | We can register IBM Cloud                 | 2             | Medium   | Mridhul K          |
|          |                    |        |   |               |          | Malepati Pranavi   |
| Sprint-3 | Train the model on | USN-17 | We can Train Out model on IBM             | 3             | High     | Aaryan Siddharthan |
|          | IBM                |        |   |               |          | Gayathri S         |

### **Project Tracker, Velocity & Burndown Chart: (4 Marks)**

| Sprint   | Total Story<br>Points | Duration | Sprint Start<br>Date | Sprint End Date<br>(Planned) | Story Points<br>Completed (as<br>on Planned<br>End Date) | Sprint Release Date (Actual) |
|----------|-----------------------|----------|----------------------|------------------------------|--|------------------------------|
| Sprint-1 | 20                    | 5 Days   | 24 Oct 2022          | 28 Oct 2022                  | 20   | 28 Oct 2022                  |
| Sprint-2 | 20                    | 5 Days   | 30 Oct 2022          | 04 Nov 2022                  | 20   | 04 Nov 2022                  |
| Sprint-3 | 20                    | 5 Days   | 06 Nov 2022          | 11 Nov 2022                  | 20   | 11 Nov 2022                  |
| Sprint-4 | 20                    | 5 Days   | 13 Nov 2022          | 18 Nov 2022                  | 20   | 18 Nov 2022                  |

#### **Velocity:**

To calculate the team's average velocity (AV) per iteration unit

$$Av = \frac{Velocity}{Sprint duration}$$

Where,

**Average Velocity** - Story points per day

**Sprint duration** - Number of days (Duration) for Sprints

**Velocity** - Points per Sprint

$$Av = \frac{20}{5} = 5$$

Average Velocity is 4 points per Sprint

#### **Burndown Chart:**

A burndown chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

#### **Burndown Chart**
